We will analyze a subset of one of the sample dataset for illustration purposes.

```
library(npbin)
#> Error in library(npbin): there is no package called 'npbin'

minimum_coverage <- 5 # minimum total coverage allowed
n_cores <- 47 # the number of cores to be used, can ONLY be 1 if run on Windows.

dt <- read.table("data_atac.txt", header = TRUE)
#> Warning in file(file, "rt"): cannot open file 'data_atac.txt': No such file
#> or directory
#> Error in file(file, "rt"): cannot open the connection
colnames(dt)
#> NULL
```

Vignette Info

Note the various macros within the `vignette` section of the metadata block above. These are required in order to instruct R how to build the vignette. Note that you should change the `title` field and the `\VignetteIndexEntry` to match the title of your vignette.

Styles

The `html_vignette` template includes a basic CSS theme. To override this theme you can specify your own CSS in the document metadata as follows:

```
output:
  rmarkdown::html_vignette:
    css: mystyles.css
```

Figures

The figure sizes have been customised so that you can easily put two images side-by-side.

```
plot(1:10)
plot(10:1)
```

You can enable figure captions by `fig_caption: yes` in YAML:

```
output:
  rmarkdown::html_vignette:
    fig_caption: yes
```

Then you can use the chunk option `fig.cap = "Your figure caption."` in **knitr**.

More Examples

You can write math expressions, e.g. $Y = X\beta + \epsilon$, footnotes¹, and tables, e.g. using `knitr::kable()`.

Also a quote using `>`:

“He who gives up [code] safety for [code] speed deserves neither.”
